|  |  | 11 | 1 |  |  | 1 |  |  |  | 11 |  |  | 1 |

At the top of each lesson number column, write the lesson number you are using to test the student. Under each lesson number column, write A) Number of Words Read Incorrectly in one minute's time in the first space provided, B) Total Number of Words Read in the second space provided, and C) Reading Accuracy Score in the third space. Determine a student's accuracy score by dividing the number of words read correctly by the number of total words read and then multiply by $100 \%$. (See page 98 for more information regarding determining a student's accuracy score.) In the fourth column enter the D) Words Read Correctly Per Minute Rate which is the number of words a student reads in one minute minus the number of words a student has misread which equals the number of words read correctly per minute.
